JUDGE'S SCORING CRITERIA

Use this page as a guide while scoring each team. Award marks according to the evidence shown in the presentation, discussion, technical explanation and prototype. Each criterion carries a maximum of 20 marks, except Prototype, which carries 100 marks.

1. Presentation — 20 marks

How clearly and convincingly does the team explain its project?

- Problem and objective are stated clearly.
- The explanation follows a logical order and stays within the allotted time.
- Slides, diagrams or demonstrations support the explanation rather than distract from it.
- The team communicates confidently and answers questions in a clear, relevant way.

2. Domain Knowledge — 20 marks

How well does the team understand the problem area and its users?

- Shows understanding of the background, target users and real-world need.
- Explains key concepts, existing approaches and relevant limitations.
- Can justify assumptions and respond accurately to questions about the domain.
- Demonstrates awareness of practical constraints, risks or requirements.

3. Proposed Solution — 20 marks

How suitable, useful and well thought out is the proposed approach?

- The solution directly addresses the stated problem.
- The idea is feasible and its main features or workflow are explained.
- The team identifies what makes the approach useful or different.
- Expected impact, users and likely limitations are considered.

4. Team Delegation — 20 marks

How effectively has the team divided and coordinated its work?

- Roles and responsibilities are clear across team members.
- Members contribute meaningfully and understand the overall project.
- Work appears coordinated, with a consistent explanation of the project.
- Members support one another and handle questions collaboratively.

5. Tech Stack — 20 marks

How appropriate are the selected technologies for this project?

- Languages, frameworks, libraries, platforms or hardware are identified correctly.
- The team explains why these tools were selected.
- The chosen stack fits the project's needs, scale and constraints.
- The team understands how the main components connect and any relevant trade-offs.

6. Prototype — 100 marks

How well does the working model demonstrate the proposed solution?

- Core features can be demonstrated and relate to the stated problem.
- The prototype works consistently enough to show the intended workflow.
- The implementation shows technical effort, integration and meaningful functionality.
- The team can explain the design, key components and current limitations.
- Testing, usability, reliability and scope of completion are considered.
- Give credit for working evidence and sound implementation; do not award marks only for appearance or claims.

Scoring note: Use the maximum marks printed beside each criterion. Score each category separately, based on what the team demonstrates and explains. The total possible score is 200
